

ICICLE

Winter Bio Cover Crop Pea

Plant Statistics

Key Attributes:

- White flowered for better palatability and digestibility
- Very strong stooing capability
- As good or better winter durability as any other winter pea

Yield:

- Exceptional forage growth

Growth Habit:

- Normal leaf pea

Maturity:

- Late flowering to match up with cereals better

Plant Height:

- 5.5 feet

Seed Type:

- 4,210 seed per pound
- More seeds per pound purchased

We at ProGene Plant Research were excited to find such a unique and versatile winter pea like Icicle in our breeding program. The unique mix of characteristics in Icicle makes it particularly attractive for all three of the important markets for a high biomass yielding winter pea.

Icicle meets the top criteria for a winter Bio Cover crop™ pea.

- Winter durability is strong
- Smaller seed size with good seedling establishment means more plants from every pound of seed
- Strong root system
- High biomass production once the plant breaks dormancy in the spring
- Can hold its own in blend with other crops and still not dominate the blend

Variety	Seed Size Seed / lb	Flower Color
<i>Icicle</i>	4,210	<i>White</i>
<i>Nutrigreen</i>	2,679	<i>White</i>
<i>Austrian Winter Pea (AWP)</i>	3,907	<i>Purple</i>
